Axzez's $99 ?Interceptor Carrier Board? for the RPi CM4 is designed for NAS and NVR and loaded with 5x SATA slots, 4x switched GbE, 2x HDMI, and 2x USB ports. Wiretrustee canceled its similar ?SATA Board? project but has posted open hardware files.

Carmel, Indiana based startup Axzez has opened $99 preorders for its Interceptor Carrier Board for the Raspberry Pi Compute Module 4. Shipments of the 5x SATA enabled carrier are due in February.

The only other SATA-heavy RPi Compute Module carrier we have seen is the 4-slot SATA Board for Raspberry Pi CM4, which was announced last February. Wiretrustee has now cancelled the delayed project but has posted open source files for others to take up the baton (see farther below).
