It’s been more than seven months since the last GeckoLinux update, and now it’s time for a new one that brings cool new features, the latest desktop environments, and many other improvements.

The GeckoLinux ROLLING edition is probably the most popular, so it now ships with the KDE Plasma 5.23.4, GNOME 41.2, Xfce 4.16, LXQt 1.0, Cinnamon 5.2.4, MATE 1.26, Budgie 10.5.3, as well as the Pantheon desktop environment from elementary OS 6.1.
