Still based on the Ubuntu 20.04 LTS (Focal Fossa) operating system series, Linux Mint 20.3 ?Una? is now available and it brings a new app to manage your recent and favorite documents, improvements to many of the official Linux Mint apps, as well as updated packages.

Linux Mint 20.3 uses the same package base as Linux Mint 20.2, and all previous updates in the Linux Mint 20 series for that matter. This means that you can easily upgrade your existing installations without downloading the new ISO images, which are here mostly for new deployments.
