LibreOffice 7.3 Open-Source Office Suite Officially Released, This Is What’s New

By Marius Nestor
Created 02/02/2022 - 11:09am
As with previous updates in the LibreOffice 7.x series, the LibreOffice 7.3 release is here to further improve document interoperability with proprietary formats from the MS Office suite in an attempt to ease the migration from Microsoft Office to LibreOffice.

Highlights include handling of change tracking in tables and when text is moved, which have a positive impact on interoperability with Microsoft Office documents, faster opening of large DOCX and XLSX/XLSM files of over 200 pages, improved rendering speed of some complex documents, as well as improvements to import and export filters.
