Pop!_OS 21.10, released in December 2021, is the latest release of Colorado-based computer vendor System76's Linux distribution. Based on Ubuntu 21.10, Pop!_OS 21.10 provides a heavily customized experience. Most packages come from Ubuntu's repositories, but the extra System76 packages change a lot. In this review, I explore what Pop!_OS 21.10 has to offer and take a look at many of the things that make the Pop!_OS desktop experience different from Ubuntu's customized GNOME and standard GNOME.
