China's military-derived and government-approved Linux distribution, Ubuntu Kylin, has revealed plans to target a second RISC-V platform.

Ubuntu Kylin is Ubuntu's official version for China and was developed in partnership with Chinese authorities, including the military.

In March 2022, a version of the OS was released for the HiFive Unmatched board ? a SiFive product in the Mini-ITX form factor and packing a five-core Freedom U740 SoC.
