[Bring your multi-platform apps to Linux desktop with Flutter 3 | Ubuntu](#) [2]

Google I/O 2022 took place last week and brought with it a host of exciting news from the world of Google, including the announcement of Flutter 3 with long-awaited Linux Desktop support!

Flutter 3 is the next big step in Flutter's journey to enable multi-platform application development across what is now six platforms: iOS, Android, Web, Windows, macOS and Linux. It features improved performance and additional profiling in Flutter DevTools, support for Material 3, Apple silicon, accessibility services and web app life-cycles on top of the snazzy new Flutter Casual Games Toolkit and much more

[Canonical at AWS Summit Washington 2022 | Ubuntu](#) [3]

Our collaboration with AWS has started in 2012 making 2022 the 10th year of working together to deliver premium open source solutions in the cloud. With Public Sector designation, our goal is to continue supporting AWS providing security and compliance for Government agencies and contractors on AWS Govcloud as and all AWS regions.
