Events: Patrick Masson, Linux Plumbers Conference, and SUSECON

By Roy Schestowitz
Created 14/06/2022 - 10:28pm

Grant money is pouring in to support institutions of higher education that are taking a strong position in the adoption of Open Source technologies. 82% of enterprise IT leaders are choosing to work with Open Source vendors, and higher education is stepping up and following suit. In order to stay competitive, campuses must take a critical look at how they manage IT portfolios and seriously consider a larger commitment to their own Open Source strategy.

- Higher Ed needs to step up to stay relevant as Open Source floods the IT world [4] [Ed: So this is where Patrick Masson moved to after he quit OSI; Danese Cooper Cooper, who worked for famous criminal Bill Gates [5], is there too]

- Registration Currently Sold Out, We're Trying to Add More Places? Linux Plumbers Conference 2022 [6]
Back in 2021 when we were planning this conference, everyone warned us that we’d still be doing social distancing and that in-person conferences were likely not to be as popular as they had been, so we lowered our headcount to fit within a socially distanced venue. Unfortunately the enthusiasm of the plumbers community didn’t follow this conventional wisdom so the available registrations sold out within days of being released. We’re now investigating how we might expand the venue capacity to accommodate some of the demand for in-person registration, so stay tuned for what we find out.

- **SUSECON 2022 highlights include container management, edge** [7] [Ed: SUSE is selling complexity instead of GNU/Linux. It's also a proprietary software reseller.]

SUSE's annual global conference, SUSECON, held virtually in June, was jam-packed with initiatives and information essential for the future of SUSE and for the open source market.

Linux OSS SUSE
