Pitivi 2022.06 Open-Source Video Editor Released with Object Tracking and Blurring

By Marius Nestor
Created 25/06/2022 - 2:17pm
Pitivi 2022.06 is here with more new features, including object tracking and blurring, detection of beats and snapping of clips to detected beats, a new Source blending mode, the ability to add border and shadow to the title clip text, as well as a VU meter for sound playback next to the video preview.

On top of that, the Pitivi 2022.06 release introduces support for maintaining the aspect ratio when resizing clips, makes it easier to fade in and fade out a video clip, and lets you cut video clips to paste them at a different position.
