A fix for legacy issues around Red Hat crypto ? The Register [2]

If you're running a mixture of new and old RHEL versions, you may have problems SSHing from new to old. Luckily, someone has worked out a handy way around it.

The issue is relatively simple: the default security settings in RHEL 9 mean that you can't open an SSH connection to a machine running RHEL 6 or older, which use the deprecated SHA-1 encryption algorithm. There are other, related issues as well: the inability to upgrade old RPM packages that are signed with SHA-1 signatures, or for Firefox to connect to an HTTPS server that uses a very old version of the protocol.

Partner Executive Video: Red Hat and Kyndryl Partnership - Invidious [3]

This post is a sequel to Common GLib Programming Errors, where I covered four common errors: failure to disconnect a signal handler, misuse of a GSource handle ID, failure to cancel an asynchronous function, and misuse of main contexts in library or threaded code. Although there are many ways to mess up when writing programs that use GLib, I believe the first post covered the most likely and most pernicious? except I missed weak pointers. Sébastien pointed out that these should be covered too, so here we are.

Here’s your weekly Fedora report. Read what happened this week and what’s coming up. Your contributions are welcome (see the end of the post)!

I have weekly office hours on Wednesdays in the morning and afternoon (US/Eastern time) in #fedora-meeting-1. Drop by if you have any questions or comments about the schedule, Changes, elections, or anything else. See the upcoming meetings for more information.

- **Next Open NeuroFedora meeting: 15 August 1300 UTC** [6]

Please join us at the next regular Open NeuroFedora team meeting on Monday 15 August at 1300 UTC. The meeting is a public meeting, and open for everyone to attend.
