Yesterday, the Linux based One Laptop Per Child was presented an INDEX: AWARD for winning the Community category. The INDEX: AWARD is presented every other year, and in addition to the glory, each award comes with a €100 000 prize. INDEX: AWARD operates with five categories, which refer to the context for which the designs are intended: body, home, work, play and community.

99 % of children in developing countries leave school without having touched a computer. Without a computer-literate population, developing countries will continue to struggle to compete in a rapidly evolving, global information economy. The One Laptop per Child (OLPC) foundation aims to provide every child in developing countries with a laptop, but given the resources that developing countries can reasonably allocate to education, the design team behind the XO, also known as the \$100 laptop, had to create an affordable, yet technically advanced solution.
