The Asus Eee PC is a diminutive sub-notebook computer that comes pre-installed with Linux and a host of installed applications including a web browser, anti-virus, Skype and instant messaging software.

There have been some very comprehensive reviews of the Eee written and rather than write another one, I wanted to look at who would actually use the Eee and perhaps answer a few questions specific to Windows users.

Let's start off with a few cold, hard facts?

Features of the Asus Eee PC (4G model)

- * 900MHz Intel Celeron processor
- * 512MB RAM
- * 4GB solid state disk (SSD)
- * Lots of connector ports: 3 USB2 sockets, ethernet port, microphone and headphone sockets, VGA output, and SD card reader.
- * Built-in 802.11b/g wi-fi for wireless Internet connectivity.
- * 7-inch, 800 x 480 resolution TFT display screen flanked by stereo speakers.
- * Xandros Linux operating system.

The Asus Eee PC is very different from most other laptop computers and yet it still offers a similar set of benefits:

Benefits of the Asus Eee PC

- * Relatively cheap - At £220, you get a lot of functionality for your money.
- * Small and light form factor means it's very mobile.

Who is the Eee Suitable for?
