Submitted by srlinuxx on Tuesday 13th of September 2005 05:22:46 PM Filed under [Reiser](#) [1] [Interviews](#) [2] [OSS](#) [3]

Hans Reiser formed Namesys and began the development of Reiserfs ten years ago. The first release of the filesystem, Reiser3, is part of the mainline 2.4 and 2.6 Linux kernels. The more recent Reiser4 is a complete redesign and reimplementaion of Reiserfs, aiming to soon be merged into the mainline 2.6 Linux kernel.

In this interview, Hans discusses his background and how he came to create Namesys and Reiserfs. He looks back at Reiser3, describing the advantages it had over other filesystems when it was released and its current state. He then explores the many improvements currently in Reiser4, describing the plugin architecture and its exciting potential for future semantic enhancements.
