Hi

I am a user of Ubuntu 7.10, kernel 2.6.22-14-generic. I have a SpeedTouch 330 USB ADSL Modem I downloaded and installed the file `usbads modemmanager_0.5.8_i386.deb` which I found on <http://www.squeezedonkey.com/svn/linux/trunk/releases/ubuntu/32-bit%20i386/>.

I filled in my access data to connect my provider.

I changed the permissions of `pppd`:

```
sudo chmod 755 /usr/sbin/pppd.
```

Now every time after I start up linux and logged in a window usually appears:

```
?Enter your password to perform administrative tasks?
```

```
?The application 'lsusb -vvv' lets you modify essential parts of your system?
```

```
?Password [ ]
```

After I filled in my password of my username Joris I can connect to internet.

Sometimes the window doesn't appear and then I can't start the USB ADSL Modem Manager.

How can I make it so that this window doesn't appear anymore?

Why does this ask to my password? Is this a problem with permissions? Let me know something.

With thanks.

Joris V. H.

P.S. I live in Belgium and I speak Dutch. So my English is not very good.
