As Linux moves into the desktop, users want to connect their digital devices to their Linux computers, and, well, at least have something happen. Long associated with difficulties in dealing with devices, Linux has come a long way. Quite a few devices such as cameras and music players, work immediately. All you have to do is plug them in. Linux has supported SD and Compact Flash cards and card readers for a long time, and USB support in Linux keeps getting better.

Once you connect your devices, the next step is to do something with your pictures, music and files. For digital cameras, you'll want to manage and organize your photo collection.

On Linux, two applications really stand out for working with photos: F-Spot and LPhoto.
