Submitted by srlinuxx on Wednesday 5th of October 2005 10:16:20 AM Filed under [Hardware](#) [1]

I think one of the best ways to tell people what the best components are, is to show them the system you would build if money was almost no object. That's where this article comes in. This is my story of building my ultimate Linux box.

[In Part 1](#) [2], I give you a good idea of which components work well with Linux and hopefully aid you in your purchasing decisions.

[In Part 2](#) [3], I will take you through some of the special construction that had to be done to accommodate some of the special hardware I selected. Although I will be commenting on what was done, much of this article will be a pictorial.

In Part 3, I'll show some final pictures of the rig and some benchmarks of the ultimate box and the budget box as well as my budget system that I outlined in the last article.
