GIMP approaches the next stable release and only a handful bugs are left to be fixed before GIMP 2.6 is ready.

Changes in GIMP 2.5.4

- improved look and feel of the Navigation dialog and navigation popups
- improved positioning of the image in the image window
- by default turned off use of GEGL for color operations
- moved the "Use GEGL" checkbox to the Debug menu
- optimized the new scaling code
- various fixes to the Python bindings
- added Python bindings for most GIMP widgets to the gimpui module
- merged GimpHRuler and GimpVRuler classes into GimpRuler
- added Search entry to the Keyboard Shortcuts and Input Controller configuration dialogs
- allow to drop images (in addition to URIs) on the empty image window
- improved error handling in Script-Fu
- merged upstream TinyScheme changes into Script-Fu interpreter
- bug fixes and code cleanup
