[2]KDissert is KDE's mindmapping tool. App of the Month interviews KDissert's author Thomas Nagy about why he started it, the relationship to BKSys and his plans for the future. There is also an overview to help you get started using this exciting application and for the first time we have a Flash Demonstration of KDissert in action. Enjoy app of the month in Dutch, [English](#) [3], French and Turkish.

kdissert is a mindmapping-like tool to help students to produce complicated documents very quickly and efficiently : presentations, dissertations, thesis, reports ... The concept is innovative : mindmaps produced using kdissert are processed to output near-ready-to-use documents. While targetted mostly at students, kdissert can also help teachers, decision maker, engineers and businessmen.
