Any person interested in publishing any data on the Internet requires Web Hosting. Web hosting has been around for several years now and has evolved from simple HTML pages hosting, small simple sites with a few images into full blown web based hosted applications where end users can visit a site, interact with the web site owner and even purchase goods and services all over the internet.

The use of Internet as a medium for integrating business across the globe with the help of Web Based software applications has produced wide range of web based technologies like ASP, ASP.NET, JSP, PHP and others. This choice has forced various options for web hosting now as HTML based sites work equally well on both Linux and Windows platforms.

Web hosting platforms vary from different types of operating systems. Microsoft Windows Server and Redhat Linux are just two examples and probably the most well known web hosting platforms. So, what is Windows or Linux web hosting and what are the advantages and disadvantages to hosting your web site on either Server. And why now Linux is gaining more popularity. Well, that's just the answer isn't it ?
