Wireless network access with Linux can still be a bit of black magic to get working, but more tools are becoming available to ease the pain of connecting a Linux system to a wireless network. One such tool is Wireless Assistant, a little KDE application that can be used to connect to various wireless networks.

Wireless Assistant is available for download at <http://wlassistant.sourceforge.net/>. It does require the KDE development packages to be installed in order to compile, and the installation process is a simple:
