Intel isn't letting any moss grow on it announcing another new chip in the oven. Besides the dual-core [announced](#) [2] yesterday, a [64-bit](#) [3] Pentium 4 due out by months end. [Here's](#) [4] a story reporting an increase in speed for the Xeon line. In addition, TechWorld is giving us a little sneak [peak](#) [5] into some of Intel's plans for the future.

But hold the phone. Ed Taylor is [reporting](#) [6] that IBM's Cell "surpasses Intel's chips in speed, performance and number of transistors" and is planning a desktop featuring said chip by years end. Will this put a bite in the Intel market lead?
