What's the best OS for use on the new ultra-portable netbook systems? I used a Samsung NC10 netbook and three operating systems to try to find out the answer.

The Samsung NC10 is a pretty standard netbook ?1.6GHz Intel Atom N270 processor, 1GB RAM, 160GB hard drive, and a really nice 10.2-inch WSVGA screen. The NC10 comes with Windows XP Home as the preinstalled OS.

As you'd expect, Windows XP runs really nicely on the NC10. Despite having what many consider to be a lowly specification, a netbook is a very capable system. Given that Windows XP is now more than seven years old, the inevitability of Moore's Law has meant that budget hardware can deliver a fantastic computing experience. The biggest problem with XP, especially for anyone who has used a more modern OS, is that it looks and feels long in the tooth.

However, no matter how tired that Windows XP looks and feels, it works very well on the NC10, and everything on the netbook is designed with XP in mind.

So, how will the little Samsung netbook feel with a different OS loaded onto it?
