Really, [you wouldn't dare..](#) [3]

- rickspencer3 proposes pulling the gimp from the CD:
 - It takes up a lot of space that we need for couchdb, etc?
 - F-Spot has key features, like crop and red-eye removal
 - It's a power user tool, users shouldn't stumble into it
- Discussion points brought up that
 - The gimp currently uses 26 megs of space, 20 of which are documentation, which could be moved online
 - The gimp, though not totally user friendly, is very useful, and does not require 'importing' to edit

ZOMG !

No offense to [Rick Spencer](#) [4] but.. How reasonable is the rationale behind this ? That *f-spot* is enough ? Enough for what ? *For laughing* ?

How do I scale an image in f-spot ? If there's a way, I have not been able to find it (same for red eyes). How do I annotate an image (putting text somewhere) ?

Yet people ask *'Gimp is cool but.. should it belong to LiveCD?'* I'll give you a better question: **what should belong to the LiveCD ?**

[rest here](#) [5]
