Our Russian friends at Unigine Corp, who have their very impressive Unigine Engine that is multi-platform and delivers the best graphics on Linux and have said they like Linux very much, last month released Unigine Heaven.

Heaven is the most-impressive tech demo / benchmark yet, but when released in October it only came out for Windows with its DirectX 11 renderer. However, as we exclusively shared, Unigine Heaven is coming out to Linux. What pushed back their Linux release was waiting on functional Linux drivers from AMD that would allow their demo to run with the tessellation mode enabled without causing a bunch of visual artifacts. They hoped AMD would have a fixed Catalyst Linux driver release in a month or two.
