Following a year that bore witness to the proliferation of open source business applications and increased adoption of Linux across the board, experts predict that 2006 will be another big year for open source.

There's been a lot going on, including a hard-at-work open source community ironing out GNU General Public License (GPL) loopholes, plus open source virtualization hitting the mainstream and Sun Microsystems and Novell Inc. anxiously waiting to see if their open source gambits pay off. Indeed, the experts promise plenty more open source news to follow in 2006.

TechTarget spoke to a couple of IT industry experts to get their predictions for the five biggest open source trends and stories to follow in 2006. In no particular order of importance, here's what they had to say:
