A highly anticipated release, KDE 4.4 has taken necessary steps to solidify the underlying Plasma technology of KDE 4 and add polish to the already shiny surface. This week, MakeTechEasier will take you on a preview of the upcoming KDE 4.4 release, scheduled for February 9. I recently installed Release Candidate 1 on my desktop computer and took it for a spin. I was not disappointed.

The following is a preview, not a review. KDE 4.4 is still under development and should not be used on production systems, nor should stability be expected. Having said that, I am typing this article within KDE 4.4 and loving all of it, especially the tabbed windows.

Default Interface

The default KDE interface continues to be the Oxygen Air Plasma theme. The KWin (window manager) buttons are slightly different, smaller and rounder, but the most impressive improvement with the default Oxygen window manager theme is the incorporation of many of the features that were found in the Nitrogen spin-off.
