The VAR Guy is booked to meet software giants and disruptive upstarts at Parallels Summit 2010 in Miami. Among the anticipated meetings: A sit-down with Cloud Linux Inc. founder and CEO Igor Seletskiy. The big question: Does the hosting world really need yet another Linux distribution? Seletskiy and Cloud Linux certainly seem to think so. Here's why.

During a Feb. 23 keynote, Seletskiy is expected to describe how hosting service providers can leverage CloudLinux to maintain balance between number of users per server and the load the server can carry. The Parallels event is expected to mark the first time Seletskiy takes the stage to talk about the CloudLinux OS.

Launched in 2009 and based in Princeton, N.J., Cloud Linux claims the company's CloudLinux OS is the 'only Linux'-based, commercially supported operating system (OS) optimized for shared hosting providers and datacenters.?

Hmmm? The VAR Guy is skeptical [2]
