Which server OS is the most appropriate must be argued in the context of the job that needs to be done, based on factors such as cost, performance, security and application usage. Which is better?

This debate arouses vehement opinions, but according to one IT consultant who spends a lot of time with both Windows and Linux, it's a matter of arguing which server OS is the most appropriate in the context of the job that needs to be done, based on factors such as cost, performance, security and application usage.

7 Open Source innovations

"With Linux, the operating system is effectively free," says Phil Cox, principal consultant with SystemExperts. "With Microsoft, there are licensing fees for any version, so cost is a factor." And relative to any physical hardware platform, Linux performance appears to be about 25% faster, Cox says.

[Combine that with the flexibility...](#) [3]
