Today is very important for Linux Mint. It's one day to remember in the history of our project as we're about to maintain a new distribution, a rolling one, which promises to be faster, more responsive and on which we're less reliant on upstream components.

Linux Mint Debian Edition (LMDE) comes with a Debian base, which we transformed into a live media and on top of which we added a new installer. It's rougher and in some aspects not as user-friendly as our other editions, it's very young but it will improve continuously and rapidly, and it brings us one step closer to a situation where we're fully in control of the system without being impacted by upstream decisions.

LMDE also represents an alternative, with the same desktop, the same functionality, but a different base, and a difference in hardware support and compatibility.
