Submitted by srlinuxx on Tuesday 7th of September 2010 06:14:12 PM Filed under [OS](#) [1]

The OpenSolaris distribution Schillix has released a version of its operating system which is based on the OpenSolaris fork Illumos.

The new version, 0.7.1i, has no differences between it and the recently released version 0.7.0 which used the open source OpenSolaris Nevada build 147.

The Illumos project was created in early August after the evidence pointed towards Oracle not actively pursuing the OpenSolaris project.
