My name is John Dukovich. I'm with Green Moon Solutions, a small technology company in the Washington, DC, area. I've been working with Microsoft Office applications, basically since they came out, and I'm a heavy user of Excel macros and Visual Basic for Applications language. I do quite a few applications for clients and use macros in ways that a lot of people don't.

Instead of just manipulating spreadsheet information, there's a lot of behind-the-scenes calculations and user GUI interface kinds of things that I do. So I'm quite familiar with Excel macros. I shied away from OpenOffice Calc for quite a while because initially I heard the macro feature wasn't as good as Excel's. And years ago, there wasn't a good conversion between the two.

However, when I got my hands on this book, OpenOffice.org Spreadsheet Macro Programming, I was curious and hoped to find I was wrong, that this would open up new opportunities for clients and organizations that want to get away from Microsoft Office, clients who are already using OpenOffice, so I was really interested to see the level of capability that Calc had in its macro programming.
