I've been meaning to blog this for a while but?

In a little over two months time, the long-awaited horror movie *The Tunnel* will receive its world premiere. Rather than a traditional theatrical release, the movie ? which is set in abandoned real-life tunnels under Sydney, Australia ? will make its debut online for free with BitTorrent. Simultaneously it will be released on physical DVD, to be distributed by Hollywood giant Paramount Pictures.

I almost fell off my chair when I heard the news that Paramount will be releasing *The Tunnel* for free on bit torrent with no DRM of any kind!
