The Document Foundation today announced the release of LibreOffice 3.5.2, the second update to the stable 3.5 tree. "LibreOffice 3.5.2 fixes an additional large number of the bugs identified by TDF QA experts and LibreOffice users worldwide."

The list of fixes is quite long this release. Glancing through the changelogs, here are some of the more interesting:

- ? adapt string type checks to work with both Python 2 and 3
- ? use transparency for gradients
- ? additional fixes for Slideshow transparency gradient effects
