Thin Client computing is the current system of choice in so many enterprise systems today with the big players being VMware and Citrix and even Windows 2008 trying to nudge its way into the act with its Seamless Remote Desktop Applications. All of these systems provide clients which will access the applicaitons which are run from a central server and all of them are well tested and run on thousands of systems.

Not to be left out Opensource is now getting its act together and the rudimentary underpinnings of a thin client infrastructure with the recent release of Ulteo 3.0 and its Open Source Virtual Desktop and Application Delivery solutions
