A little under a year ago I wrote a happy post about LibreOffice. The team back then showed a strong focus on cleaning up and re-architecting LibreOffice to make it ready for the future.

MUCH WORK

SUSE's Michael Meeks recently made the awesome graph on the right about the stuff being cleaned up from LibreOffice - besides removing a large amount of unused code there has been translating of comments and much other stuff. As I wrote in my previous post: that was (and still is) much needed. Without a lean and mean code base you can't get and keep contributors and making changes takes forever. As say the 3-months GSOC project needed to just get a multi-line edit in Calc shows... And getting contributors is a major goal of LibreOffice - with over 200 new people committing code, they're quite good at it!
