It is often said that Linux Desktop distros spend half their time playing catchup with the Windows or OSX Desktop environments. I'd agree for many years this has been the truth however something is happening in the world of Linux. I is starting to innovate again.

Some might say that it has been doing this for years, however i think its fair to say with the numbers of Windows users coming over to the desktop it's had to slow down the innovation and focus on the usability aspect.
