Bigger may be better if you're from Texas, but it's becoming increasingly clear to the rest of us that it really is a small world after all.

Case in point? None other than what one might reasonably call the invasion of tiny Linux PCs going on all around us.

We've got the Raspberry Pi, we've got the Cotton Candy. Add to those the Mele A1000, the VIA APC, the MK802 and more, and it's becoming increasingly difficult not to compute like a Lilliputian.

Where's it all going? That's what Linux bloggers have been pondering in recent days. Down at the seedy Broken Windows Lounge the other night, Linux Girl got an earful.
