This tutorial shows how to [prepare an OpenSUSE 12.2 64bit \(x86_64\) server with nginx for the installation of ISPConfig 3](#) [3], and how to install ISPConfig 3. Since version 3.0.4, ISPConfig comes with full support for the nginx web server in addition to Apache, and this tutorial covers the setup of a server that uses nginx instead of Apache. ISPConfig 3 is a webhosting control panel that allows you to configure the following services through a web browser: nginx and Apache web server, Postfix mail server, MySQL, Dovecot POP3/IMAP, BIND or MyDNS nameserver, PureFTPd, SpamAssassin, ClamAV, and many more.
