The Secure Boot saga may seem like it's been dragging on forever here in the Linux blogosphere, but the truth is that it's a mere babe in Redmond arms compared with the never-ending Apple v. Samsung drama.

It seems safe to say that most FOSS fans are sick to death of hearing about both of them, of course, but recently the always-insightful team over at TuxRadar posed yet another interesting question. Specifically, "What can Linux really steal from Apple?" was the title of the latest Open Ballot poll posted on the thought-provoking site, and there's no doubt it's provoked a lot of thinking.

More than two dozen comments appeared in short order on the TuxRadar site; unanimity, however, was harder to find.
