Darhon Finance is a comprehensive personal finance program packed with features to manage finances and bank accounts, track credit cards and investments and plan for expenses. It goes far beyond serving as a typical electronic check or bank book register.

That leap to being full financial package puts it in the realm of database functionality. That means you will spend a fair amount of time setting up each of your banking and investment accounts piece by piece and field by field.

If all you really need is a program to track your bill paying and bank deposits and manage your finances, numerous better choices exist for the Linux desktop. Darhon Finance does everything other financial programs do plus more.
