My friend Jerry is 70+ years young. Jerry has also been a client of mine on and off over the past several years for on-site support calls at his home office. Recently he was telling me how his aging Dell Dimension 2400 with Windows XP was running so very slow it was frustrating. We all know the story, the Microsoft OS was suffering from crud creep after several years of use. A cleanup and/or reinstall was needed to get it back to running faster. The other option is a new PC. Jerry is on a fixed income and cannot afford to replace the PC with a new one running ?Microsoft Latest OS!? at this time.

I talked with Jerry about his options, and he decided to give Linux a shot on this old Dell.
