A few days ago i checked out Google Trends for the first time. I tried to check out the search / popularity trends for the various desktop environments available for Linux namely GNOME, KDE, XFCE, LXDE. All was well and good until i turned ON the dreaded "forecast" check box.

Google seems to be adamant and denies that KDE will exist in near future. I couldn't find an dotted extension for the green line in the above snapshot. It does show a descending curve for GNOME and a stable unwavering lines for XFCE and LXDE. At first when i noticed this a few days ago i thought that it was an anomaly in the tool and decided to checkout the tool later.
