We've taken you through a tour of Window Managers in Linux, and now it's time to show you the Window Manager's bigger brother: the desktop environment, or DE for short. With a sea of choices out there, we can see where Linux newbies might feel a bit overwhelmed. Catch us after the break and we'll show you some of our favorites, along with a few honorable mentions.

First things first: a desktop environment is an implementation of a graphical user interface commonly mimicking a physical desktop. Think about your grade school desktop on your computer screen, with folders, binders and notepaper and you'll get the idea. A desktop environment also encompasses a slew of other tools to assist you in graphical computing.
