For those who aren't aware Elementary is the top level building block for the Enlightenment Foundation Libraries (EFL). The EFLs reached their first stable release almost a year ago, but aside from E17 there haven't been very many applications written using these libraries to date. Today I would like to highlight a few applications that are being developed using Python and Elementary that have reached a usable state.

Epour - Torrent Client:

Epour uses libtorrent as a back end and currently supports all the basic features you need for a functional torrent client.
