Created 17/01/2013 - 11:42pm

Submitted by srlinuxx on Thursday 17th of January 2013 11:42:43 PM Filed under [Linux](#) [1]

ROSA Desktop Fresh is the latest addition to the line of Linux distributions published by ROSA Laboratory, a Linux software solutions provider based in Moscow, Russia. The first stable edition is ROSA Desktop Fresh 2012, released on December 19 2012.

Before its release, ROSA Desktop Enterprise was the only other stable desktop line from ROSA Laboratory. The difference between Desktop Fresh and Desktop Enterprise is that the former will feature the latest and greatest (read: bleeding-edge) Linux kernel and applications, while the later will always ship with more stable (Debian-style) applications.

While the K Desktop Environment (KDE) is the primary desktop environment of ROSA Linux, the LXDE and GNOME 2 desktop environments are officially supported.
