Linux Deepin is one of my favorite desktop distributions. A Chinese distro that is based on Ubuntu Desktop, it is not just a rebranded Ubuntu desktop, but offers a desktop computing experience different from that of its parent distribution.

Its graphical package manager, music and video players, and a cool screen shot tool, are original to it. While previous editions offered a customized GNOME Shell desktop, the next edition, Linux Deepin 12.12, will ship with a new desktop environment called Depth Desktop Environment (DDE). And the graphical package manager, music and video players, and the screen shot have been spiced up. From what I've seen, Deepin fans will be very pleased with DDE and everything else that comes with it.
