There are more than a billion people around the globe living with some sort of disability today, yet software in general and operating systems in particular are just beginning to address their computing needs.

Microsoft's Windows 8 reportedly brought with it some accessibility improvements, and now a new project on the Linux side aims to take such efforts even further with a brand-new Linux distribution specifically targeting disabled users.

‘I want to build a Linux operating system focused on accessibility,’ explains developer Jonathan Nadeau in his Sonar Project campaign page on Indieogogo. ‘Not just for blind and low vision people, but for people who struggle with dyslexia and learning disabilities as well as accessibility for people with low motor skills and quadriplegics.’
