Of the open-source content management systems (CMSs) available today, WordPress, Joomla and Drupal are, according to Web technology tracker W3Techs, by far the most popular. But how do companies choose which to use?

Conventional wisdom has it that WordPress is the fast and easy way to go, while Drupal works best for large, complex, enterprise-class websites. Joomla fits somewhere in the middle -- it has some of the power of Drupal but with greater ease of use. That doesn't tell the whole story, however. All three CMSs have evolved beyond their roots: Drupal is getting easier, WordPress more sophisticated and Joomla offers both a CMS and a related Web development platform on which it can run.

This month we start a series that looks at this decision through the eyes of the people who use these systems. In this first part of the series, we start with Drupal.
