Valve announced today that Steam is now available for the open-source operating system Linux. The free application can be found in the Ubuntu Software Center.

To celebrate the release, Valve kicked off a week-long sale on 50 available Linux games. The sale offers gamers the chance to save up to 50 percent off of the original price.

Rumors of Steam for Linux have long been discussed. Last July, Valve confirmed that they were working on such a product. By November, Valve began a closed beta and in December, the company opened the beta to the public.
