I am usually quick to write an article or something on the latest Ubuntu or Fedora release. But for Red Hat's new Fedora 18 operating system, I thought I'd hold off a little. To be blunt, Fedora 18 is a horrible release. Let me explain the issues that I encountered with the latest update.

On occasion, you can generally get a fair idea of an operating systems potential from running the Live CD. Upon boot, F18 seemed fast enough and stable enough to prompt me to attempt a full installation. Appearance and aesthetics, it is not too different from it's predecessor Fedora 17. In fact, one might even struggle to determine the difference between the two. Aesthetics aside, I was determined to find what was really making it all tick underneath. The first thing that Fedora and fellow Linux veterans will notice is the new installer.
